

FINTRACK

Financial Tracking System made using HTML/CSS and JAVASCRIPT

Huzaifa Jamil Osman

Overview

The System helps to keep track of all your incomes and expenses. It is also very common that we forget who owes us money or who we owe money to so the system also keeps track of that. There is a dashboard which keeps store of all the datas and displays it to the user. The whole system is user friendly as this is just a practice project. I have plans to modify the project in the future, add more graphs and more features. I also plan to change the layout as well, but for now consider this a prototype.

Goals

1. Learning frontend dev work
2. Building a project that will be of use in the financial/economic market

Specifications

There are 4 pages: DashBoard, Income, Expenses and Debt Manager.

In the DashBoard, all the datas and transactions are displayed.

DashBoard

Total Income: 45000

Total Expense: 2200

Disposable Income: 42800

Net Debts: 250

Recent Transactions

Type	Amount	Note	Date	Delete
Debt (To Me)	250	He needed to Uber and didnt have cash.	1/28/2026	delete
Expense	100	Electricity Bill	1/28/2026	delete
Expense	2100	House Rent	1/28/2026	delete
Income	45000	Salary	1/28/2026	delete

If the transaction is not needed, you can simply delete it. It also stores the date on which the transaction was done. The DashBoard gives a whole insight on the income, expenses and the debts, which can be used to study your monthly overview.

The income page lets you add your salaries and your other source of income. It records the data on a table and displays it on that page.

Add Income

Amount

Note

Add

Amount	Note	Date	
45000	Salary	1/28/2026	delete

The interface of the expense page is exactly similar to the income.

Add Expense

Add

Amount	Note	Date	
2100	House Rent	1/28/2026	delete
100	Electricity Bill	1/28/2026	delete

The debt manager page keeps track of the money you owe people and the money people owe you.

Debt Manager

They Owe Me
▼

They Owe Me
I Owe Them

Name	Amount	Reason	Type	Delete
Robin	250	He needed to Uber and didnt have cash.	They Owe Me	delete

Through choosing the option and inputting a reason, it will be much easier for the user to recall. Once the transaction is complete, the user can delete it.
